Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 14, 16, 28, 29 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gudat et al (WO 95/28524) in view of Yamamoto et al (5,875,854).

As per claims 1 and 14, Gudat teaches:

A position determining apparatus comprising (figure 2):

- at least one detector equipment placed generally at a designated place on the machine spaced away from the working part of the tool, the position determining apparatus configured to provide data that corresponds to the position and orientation of the designated place on the machine in a fixed coordinate system (figure 4);
- at least one position relationship device configured to determine a positional relationship of the working part of the tool relative to the designated place on the machine in a machine-based coordinate system (page 28, lines 32-35);
- a calculating device operatively configured to provide at least one of the position and the orientation of the working part of the tool in the fixed coordinate system based upon the position and orientation of the designated place on the machine in a fixed coordinate system and the

Art Unit: 3661

positional relationship of the working part of the tool relative to the designated place on the machine in the machine-based coordinate system (figure 7e).

Gudat does not teach the inclination of the working part. However, Yamamoto teaches it in the abstract. Therefore, it would have been obvious to one skill in the art to combine the aforementioned inventions in order to perform appropriate automatic dozing operation according to working conditions and soil properties in the field.

As per claims 16, 28 and 31, Gudat teaches a stationary measuring station placed in the vicinity of the machine, the stationary measuring station operatively configured to determine the position of the machine in cooperation with the detector equipment; and the at least one detector equipment comprises at least one movable detector unit movable between determinable positions in relation to the machine (figures 1-5).

Claims 3, 6 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gudat et al (WO 95/28524) in view of Yamamoto et al (5,875,854), further in view of Diekhans (6,073,070).

As per claims 3, 6 and 19, neither Gudat nor Yamamoto teaches the position-determining apparatus further comprises a stationary measuring station placed in the vicinity of the machine, the stationary measuring station operatively configured to determine the position of the machine in cooperation with the detector equipment; and the at least one detector equipment comprises at least two detector units placed at the designated place on the machine arranged in fixed positions relative to the machine, the at least two detectors arranged to cooperate with the stationary measuring station to give the orientation in space for the designated place on the machine.

Art Unit: 3661

However, Diekhans teaches it in figure 7. Therefore, it would have been obvious to one of ordinary skill in the art to combine the aforementioned inventions in order to optimize the operation of the vehicle.

Claims 2, 4, 7, 15, 27 and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gudat et al (WO 95/28524) in view of Yamamoto et al (5,875,854), further in view of Ford (6,211,821).

As per claims 2, 4, 7, 15, 27 and 30, neither Gudat nor Yamamoto teaches the north-seeking/target unit. However, Ford teaches it in column 1, line 20. Therefore, it would have been obvious to one of ordinary skill in the art to combine the aforementioned inventions in order to enhance the system

Claims 5, 8, 18 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gudat et al (WO 95/28524) in view of Yamamoto et al (5,875,854), further in view of Johnson (5,606,444).

As per claims 5, 8, 18 and 20, neither Gudat nor Yamamoto teaches the optical unit aligns itself towards the stationary measuring station with help. However, Johnson teaches it in column 2, lines 5-15. Therefore, it would have been obvious to one of ordinary skill in the art to combine the aforementioned inventions in order to enhance the system.

Claims 9 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gudat et al (WO 95/28524) in view of Yamamoto et al (5,875,854), further in view of Schupfner (6,374,190).

Art Unit: 3661

As per claims 9 and 22, neither Gudat nor Yamamoto teaches how to calculate the angular position relative to the map. However, Schupfner teaches it in column 1, lines 17-25. Therefore, it would have been obvious to one of ordinary skill in the art to combine the aforementioned inventions in order to enhance the system.

Claim 21 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gudat et al (WO 95/28524) in view of Yamamoto et al (5,875,854) in view of Johnson (5,606,444), further in view of Ford (6,211,821).

As per claim 21, neither, Gudat, Yamamoto nor Johnson teaches the north-seeking/target unit. However, Ford teaches it in column 1, line 20. Therefore, it would have been obvious to one of ordinary skill in the art to combine the aforementioned inventions in order to enhance the system.

Claims 10 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gudat et al (WO 95/28524) in view of Yamamoto et al (5,875,854), further in view of Ethridge (5,798,733).

As per claims 10 and 23, neither Gudat nor Yamamoto teaches the accurate device that at time intervals measure the actual position of the vehicle. However, Ethridge teaches it in column 2, lines 17-23. Therefore, it would have been obvious to one of ordinary skill in the art to combine the aforementioned inventions in order to enhance the system.

Art Unit: 3661

Claims 11 and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gudat et al (WO 95/28524) in view of Yamamoto et al (5,875,854) in view of Ethridge (5,798,733), further in view of Vanderwerf (5,774,832).

As per claims 11 and 24, neither Gudat, Yamamoto nor Ethridge teaches how to calculate the vehicle acceleration and how to integrate the acceleration. However, Vanderwerf teaches it in column 1, lines 10-16. Therefore, it would have been obvious to one of ordinary skill in the art to combine the aforementioned inventions in order to enhance system.

Claims 12 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gudat et al (WO 95/28524) in view of Yamamoto et al (5,875,854) in view of Ethridge (5,798,733), further in view of Yamada et al (5,974,675).

As per claims 12 and 25, neither Gudat, Yamamoto nor Ethridge teaches what is stated by the applicant. However, Yamada teaches it in the abstract. Therefore, it would have been obvious to one of ordinary skill in the art to combine the aforementioned inventions in order to enhance the system.

Allowable Subject Matter

Claims 13, 17, 20, 26 and 29 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 3661

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Olga Hernandez whose telephone number is (703) 305-0918. The examiner can normally be reached on Monday through Friday from 8:30 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas Black can be reached on (703) 305-8233. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
